

We are delighted to announce a new strategic partnership with Fidelity SecureDrive, a division of Fidelity Services Group, the largest integrated security solutions provider and industry leader in protection innovation.

Fidelity SecureDrive provides market-leading vehicle tracking solutions with the utilisation of the SigFox 0G network, immune to the techniques and equipment used to jam tracking devices by criminals today as it does not require a network handshake. The Sigfox tracking unit is extremely jamming resilient, allowing for faster stolen vehicle recovery!

The Sigfox 0G network operates on a separate frequency from cellular for cell jamming and is the only a-synchronise network in South Africa that makes it defensive against cell jamming.

With a **95% recovery rate**, Fidelity SecureDrive is offering **CIB policyholders** a wireless, non-intrusive unit as well as a wired unit that meets the needs of customers who require telematics capabilities.

- CIB will discount the vehicle premium by a maximum of **R79.00 P/M** per vehicle where there is a compulsory tracking unit requirement for theft cover to be in force.
- Vehicles with a SecureDrive unit fitted will enjoy a zero theft/hijack excess in the case of most vehicles, and a reduction of theft/hijack excess from 10% to 5% in very high risk vehicle.
- A single SecureDrive unit in all vehicles where tracking is a requirement. No double or backup units required!
- This agreement will form part of a **36 month contract period with Fidelity SecureDrive.**
- Current CIB policyholders who have a double tracking unit requirement on certain High Risk vehicles, as well as existing CIB policyholders who have expired contracts from an alternative service provider are requested to make use of the exclusive pricing benefit.

Sigfox

R79.00 including VAT

- Sigfox is our entry-level product, mainly used for the purpose of stolen vehicle recovery.
- Solo is a wireless self-powered unit based on an independent IOT network.
- Location update once every 24hrs.
- Sigfox-enabled GPS trackers can not be jammed. This allows for faster stolen vehicle recovery.

It is important to note that Sigfox Technology is immune to jamming as it does not require a network handshake. Even if the local tracker is being jammed, the tower can still receive the signal without needing acknowledgement from the network.

Additionally, Sigfox towers are capable of detecting the signal, even under the RF noise floor.

GSM

R212.00 including VAT

GSM utilises the latest intelligent telematics technology and advanced fitment techniques to take stolen vehicle recovery, real-time tracking and advanced telematics to the next level.

A feature rich product that includes access to a Fleet Portal as well as a Fleet App.

The portal/app include items such as insurance claim submissions, expense management, trip management and personal safety through impact detection, which allows you to be in command of a range of data at the tap of a screen/button.

These intelligent devices provide proactive information and signals to the control room and ground teams.
